Preface	i
Koji Aoyama <i>An iterative method for fixed point problems for sequences of nonexpansive mappings</i>	1
L. C. Ceng, Q. H. Ansari and J. C. Yao <i>Extended B-well-posedness and property (H) for compositely set-valued vector optimization under perturbation</i>	9
Yi-Chou Chen and Hang-Chin Lai <i>Quasi-fixed polynomial solutions of real-valued polynomial equation</i>	27
S. Dhompongsa, W. Inthakon and W. Takahashi <i>Strong and weak convergence theorems for equilibrium problems and generalized nonexpansive mappings in Banach spaces</i>	39
T. Domínguez Benavides and S. Phothi <i>Genericity of the fixed point property under renorming in some classes of Banach spaces</i>	55
Kazimierz Goebel <i>Examples for an old problem on commuting mappings</i>	71
Takanori Ibaraki and Wataru Takahashi <i>Strong convergence theorems by two hybrid methods for equilibrium problems and feasibility problems in Banach spaces</i>	77
Shigeru Iemoto, Wataru Takahashi and Hatairat Yingtaweessittikul <i>Nonlinear operators, fixed points and completeness of metric spaces</i>	93
V. A. Khatskevich and V. A. Senderov <i>Topological and geometric properties of indefinite spaces and automorphisms of the unit operator ball</i>	103

Lai-Jiu Lin and P. H. Sach <i>Systems of generalized quasivariational inclusion problems with weak convexity and weak continuity and variants of set-valued vector Ekeland's variational principle</i>	115
Genaro López Acedo and Tomonari Suzuki <i>Browder's convergence for (uniformly asymptotically regular) one-parameter nonexpansive semigroups in Banach spaces</i>	131
Sehie Park <i>Fixed point theorems in the new era of the KKM theory</i>	145
Adrian Petruşel and Ioan A. Rus <i>The theory of a metric fixed point theorem for multivalued operators</i>	167
Wataru Takahashi <i>Nonlinear mappings in equilibrium problems and an open problem in fixed point theory</i>	177
David Yost <i>Lipschitz selections for multifunctions</i>	199
Organizers	213
List of participants	215
