Contents

Preface i

Shigeo Akashi and Satoshi Kodama
The homeomorphism problem of symmetric ε-expansive dynamical systems 1

Koji Aoyama, Fumiaki Kohsaka and Wataru Takahashi
Strong convergence theorems by shrinking and hybrid projection methods for relatively nonexpansive mappings in Banach spaces 7

Sachiko Atsushiba and Wataru Takahashi
Weak convergence theorems for a family of relatively nonexpansive mappings in Banach spaces 27

Marián Fabian
That ℓ_p cannot sit in ℓ_q shown via Stegall's variational principle ... 41

Kazimierz Goebel
An example in nonexpansive mappings theory 45

Takanori Ibaraki and Wataru Takahashi
Strong convergence theorems for a finite family of nonlinear operators of firmly nonexpansive type in Banach spaces 49

Seiichi Iwamoto and Akifumi Kira
The Fibonacci complementary duality in quadratic programming ... 63

Kenji Kimura and Yeong-Cheng Liou
Convexity of the solution mapping of vector equilibrium problem and its

applications 75

Yasunori Kimura
An improvement of coefficient condition for weakly convergent iterative schemes 85

Akifumi Kira
The golden optimal path in quadratic programming 95

Yukihiro Maruyama
Algorithm to obtain optimal policies of recursive bitone sequential decision process 105

Yoshihisa Nakamura
On the Cauchy problem of quadratic nonlinear Schrödinger equation with Stark potential in three space dimensions 121

Yasushi Narushima, Takahiko Wakamatsu and Hiroshi Yabe
Extended Barzilai-Borwein method for minimizing a strictly convex quadratic function 133

Rabia Nessah, Moussa Larbani and Tarik Tazdait
New sufficient conditions for the g-maximum inequality 143

Nobusumi Sagara and Milan Vlach
Convex functions on σ-algebras of nonatomic measure spaces 153

Satoshi Suzuki and Daishi Kuroiwa
A Characterization of H-biquasiconjugate for quasiconvex functions 173

Syuuji Yamada, Tamaki Tanaka and Tetsuzo Tanino
Outer approximation methods for solving a global optimization problem

with reverse convex constraints 181
